Eating Addiction: **Stop Weight Gain Today...**

Food and eating addictions and their subsequent path to obesity, type II Diabetes and ill-health are out of control within modern society. The psychological dependency and developed habitual aspects of food and eating addictions can be challenging due to the availability, perceived desirability and convenience of unhealthy, highly processed, chemical, carbohydrate and calorie charged foods. Until now *'diets and weight loss programs'* have had little impact on the underlying habit/addiction. Most programs assume eating addictions can be treated with drugs, willpower, or by denying or limiting calories! These treatment approaches can be frustrating and fail to address the biological & psychological aspects of the body's needs and the basis of the habit/addiction.
